PROJECTS

Kaamwaala – September 2024 - December 2024

- Kaamwaala.com is a job portal platform designed to connect employers with skilled blue-collar workers.
- Developed and deployed a job portal platform, Kaamwaala.com, connecting employers with skilled blue-collar workers across various industries.
- Implemented frontend features using **React.js**, ensuring a responsive and dynamic user interface for job seekers and employers.
- Built a secure backend using **Node.js** and **MongoDB/MySQL**, optimizing data management and user interactions.
- Integrated **Firebase Authentication** for secure user login and account management, improving security and user experience.
- Hosted the platform on AWS, ensuring scalability and high availability to support growing traffic and users.
- Utilized **Git** for version control.

Smart Retail Inventory Management Using IoT – June 2024 – August 2024

- Implemented IoT-based smart inventory management with improvement in real-time tracking using RFID tags and IoT sensors across all store products.
- Optimized stock levels by reducing overstock by 30% and minimizing out-of-stock incidents through predictive analytics and low stock alerts.
- Monitored and controlled environmental conditions in warehouses, ensuring accuracy in data collection and reducing product spoilage.
- Streamlined inventory updates by automating data transmission to centralized systems, reducing human errors by 40% and enhancing operational efficiency.
- Generated valuable insights into inventory trends and reduced restocking time, leading to better decision-making and improved customer satisfaction.
